1. Result / Resultado

Controlled conclusion / Conclusión controlada
The public-safe audit now reconciles every canonical judicial act in the 2017–2026 complete-record catalogue. It does not establish that the whole court file or every AC report has been obtained. / La auditoría pública segura concilia ya todos los actos judiciales canónicos del catálogo 2017–2026. No acredita que se haya obtenido todo el expediente ni todos los informes de la Administración Concursal.

Class / Clase	Count / Total	Control meaning / Significado
Core primary decisions / Resoluciones centrales	28	Controlled copy, 2018–2026
Earlier in-case anchors / Anclas internas	4	Controlled copy, 2017
Contextual decisions / Resoluciones contextuales	2	Separate civil/derivative lanes
Court-office acts / Actos de oficina judicial	2	Copy controlled; family incomplete
Open or partial families / Familias abiertas	15	Primary act or family still incomplete
Total audit rows / Filas totales	51	Same-date acts remain separate

Source note / Nota de fuente: Repository records and connected Google Drive discovery were reviewed. Canonical inventories also preserve prior email-derived source control. No private provider ID, URL, address or filename is reproduced here.

2. Material corrections / Correcciones materiales

Issue / Tema	Correction / Corrección
2017 anchors	Added C36-E002 and preserved the 22 March, 5 May and 19 December decisions as four earlier in-case anchors.
8/15 February 2018	Removed the unsupported second-act row. One C36-E007 act remains under 15 February repository control; body/recital and signature date layers require direct reinspection.
Controlled omissions	Restored C36-E009, E030, E035, E039, E040, E042 and R26 from canonical sources.
Same-date acts	Separated eight pairs: 16 Apr 2018; 24 Oct 2019; 12 May 2020; 24 Feb 2021; 6 May, 15 Oct 2021; 26 Jan 2022; 12 Sep 2025.
18 May 2021	Reports the operative approval wording without treating the copy itself as proof of service, review or procedural finality.
2022 judicial leads	Gives separate open rows to E056, E060, E062 and E063 and keeps complaints 375/379 separate.
Constitutional Court	Treats the 2811/2023 inadmission date as reported and unconfirmed until the official decision is obtained.
Separate proceedings	Keeps Judgment 89/2014 and Judgment 4/2026 contextual and outside the in-docket core count.

3. Decision-continuity assessment / Evaluación de resoluciones

- All 39 canonical judicial acts dated 2017–2026 in the complete-record catalogue are represented exactly once in the 51-row projection.
- The 28 core decisions are controlled copies in the 2018–2026 Insolvency spine; the four 2017 acts are earlier anchors, and the two contextual decisions remain outside that count.
- The 25 October 2021 Diligencia is verified/partial; the signed 27 October 2021 Diligencia is controlled. Their underlying filing, testimony and report families remain incomplete.
- The 2014–2016 discovery rows and the year-only 2022 complaints row are declared aggregation exceptions until individual originals can be authenticated.
- ‘Not located’ means absent from the controlled corpus; it never means nonexistent without a certified denominator.

Para cada escrito o resolución cree nodos separados para presentación, recepción, oposición, decisión, notificación, aclaración o reposición, apelación, resolución de apelación, firmeza e implementación/contabilidad. Concilie cada resultado con los registros canónicos; mantenga separadas las resoluciones de igual fecha y los procedimientos contextuales. Audite por separado todos los informes de la Administración Concursal y sus anexos, incluyendo presentación, traslado, impugnaciones, resolución, libro mayor, banco y rendición final. Marque ‘no localizado’ sin inferir inexistencia. 9. Evidential and publication boundary / Límite

A decision copy closes only its copy node, not filings, service, review, finality or implementation/accounting. An AC report proves what was reported, not each underlying financial, bank, title or Registry fact. No unlawfulness, nonexistence, procedural finality or merits outcome is inferred from an unlocated record. This candidate is local and unpublished; no push, pull request, merge, deployment, live verification, email or filing is claimed.
